                The present invention relates to a monoclonal antibody against an agglutinia-like sequence (ALS) 1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida albicans agglutinin-like sequence (ALS) gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        840

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    951
agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida

New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an V-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an

New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /*tag= a

New monoclonal antibody against Candida albicans agglutinin-like sequence 1 adhesin proteins, for use as a vaccine to treat or prevent disseminated candidiasis, or to generate an immune response that blocks adherence of the organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a monoclonal antibody against an agglutinin-like sequence (ALS)1 protein that specifically binds an epitope in an N-terminal domain and which inhibits adherence of Candida albicans to endothelial cells. The invention is useful as vaccines for treating and preventing disseminated candidiasis and for generating an immune response capable of blocking adherence of the organism. The invention is also useful in gene therapy. The present sequence is Candida
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (seq:"ttg", aa:Tyr)

Gene probe 431.19 (AAQ62522) hybridised to all but 4 of the 87 clinical from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans. A C.albicans gene library was prepared in pBR322 and inserts were selected for multiple presence in the genome, strong conservation without deletions or insertions and absolute specificity for C.abbicans Gene probe 431.19 (AAQ62552) hybridised to all but 4 of the 87 clinical isolates of C.abbicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A C.albicans gene library was prepared in pBR322 and inserts were selected for multiple presence in the genome, strong conservation without elections or insertions and absolute specificity for C.albicans Gene probe 431.19 (AAG62552) hybridised to all but 4 of the 87 clinical isolates of C.albicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAG62558-062594). All were found to be absolutely specific for C.albicans.                                                                                                                                                                                                                                         A C.albicans gene library was prepared in pBR322 and inserts were selected for multiple presence in the genome, strong conservation without deletions or insertions and absolute specificity for C.albicans. Gene probe 431.19 (AAQ62522) hybridised to all but 4 of the 87 clinical isolates of C.albicans being tested. A clone (436.1) was then isolated from the 4 isolates not recognised by 431.19. Some 100mer oligonucleotides covering the complete sequences of 431.19 and 436.1 were synthesised and tested (see AAQ62558-Q62594). All were found to be absolutely specific for C.albicans. The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments The invention also relates to the administration of GP900 or fragments thereof to a host to elicit anticompartic proteins comprising administration of method of cryptosporidiosis treatment of GP900 antibody production, and to a method of cryptosporidiosis treatment or individual. Cryptosporidium parvum GP900 and GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 antibodies to an artibodies also inhibit sporozoite or merozoite attachment or invasion, and artibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 proteins, fragments and antibodies may therefore be used to treat or prevent cryptosporidiosis. Infection with Cryptosporidium is a common or cause of diarnhoea in humans and causes life-threatening diarnhoea in immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of diasease in animals, resulting in financial losses in agriculture. GP900 fragments, fusion proteins and antibodies may also be used for the diagnosis of Cryptosporidium parvum infections, and for the cused for the diagnosis of Cryptosporidium parvum infections, and for the detection of the parasite in the environment. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 993 AAGTGTTGATAAAACCAAAACAATCGAAATTTTGCAACCTATTCCAACCACTACCATCAC 1052

The present invention relates to a method of detecting Cryptosporidium in biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptospain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum coding sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA.

Sequence 16245, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: KELTH Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT PELLING DATE: 1999-02-12

PRIOR PELLING DATE: 1999-02-13

PRIOR PILING DATE: 1998-02-13

PRIOR PILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 16245

LENGTH: 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NAME/KEY: UNSURE

Sequence 16698, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132
CURRENT FILING DATE: 1999-02-12
PRIOR PELING DATE: 1999-02-12
PRIOR PELING DATE: 1999-02-13
PRIOR PILING DATE: 1998-06-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 16698
LENGTH: 229
                                                                                                                                                                                                                                                                                                                                                                               TATGCTTTCAAAGGGCCAGGATACCCAACTTGGAATGCTGTTTTTGGGTTGGTCCTTAGAT 120
